

## Frequently Asked Questions

### Who should consider MSFC systems engineering?

Systems engineering is crucial to the success of any major project, and developing the next generation of strong systems engineering practitioners and leaders has become an Agency-wide priority. If you have an aptitude for understanding the big-picture view of complex systems as well as leading others, MSFC Systems Engineering Leadership Development might be for you.

### How do I know if I am ready for participation in the program?

If you are interested in the MSFC Systems Engineering Leadership Development program, talk to your supervisor to determine if the program is a good fit for you.

### What benefits will I get from participating?

While the MSFC Systems Engineering Leadership Development program does not give you any preferential treatment for job listings or promotions, it does help you develop skills that will make you a more qualified applicant for such jobs.

### What if I believe I have already completed some or all of the program requirements?

Please contact one of the Program Managers who will assess your training/development history and discuss appropriate options for moving forward. Because this is a developmental program and not a certification, it may be that you have already completed a combination of training and development equivalent to this program. If so, you have already achieved the goal of this effort, which is to engage employees in developmental activities that help to build well-rounded systems engineers, capable of providing the expertise needed at MSFC to take on current and future mission challenges. Individuals who have completed the equivalency of program content are not candidates for this program.
